

Phase 7 – Project Documentation

Project Documentation Summary:

The project implements record-level security using script-controlled READ, WRITE, CREATE, and DELETE ACLs.

The documentation covers:

- User and role creation.
- Custom table and field creation.
- Record creation with different branch values.
- ACL configuration for READ, CREATE, WRITE, and DELETE operations.
- Role requirements and data conditions.
- Script-controlled access for administrators and EEE branch users.
- Verification steps for each ACL operation.
